DOPPSTADTUS MARKETMIGHT DEALER UPDATE 3/3/10 Vol 1 Iss 2

DOPPSTADT DOMINATES USCC DEMO

As were most leading manufacturers of environmental processing equipment, DoppstadtUS was an exhibitor at the United States Composting Council's 18th Annual Conference and Trade Show, January 24-27 in Orlando, Florida. Also accompanying us was Peninsula Equipment, our new dealer partner for the Florida market.

During the equipment showcase, DoppstadtUS had a DW 3060 SA slow speed shredder and an SM 726 trommel screen in operation. It was clear that attendees were very interested in seeing a demonstration of our products; when the DW 3060 SA was finally started, the crowd slowly began to make its way toward our site. By the time our presentation was fully underway, most of the more than 100 attendees had gathered around our machine.

"Both the DW shredder and the SM trommel clearly outperformed their competitive counterparts, leaving the guests quite impressed," recalled Martin Morgan, DoppstadtUS regional manager. "Most of the other machines that participated in demonstration experienced performance issues, and had difficulty keeping up with the productivity of the DW shredder running the material that was provided." The SM trommel screen demonstration also showed the strength of Doppstadt screening solutions when applied in a compost application.

A number of very promising leads were generated through our attendance at this event, and we believe the likelihood of closing several sales is very strong as a result. Our next event will be at the Construction and Materials Recycling Association's C&D World 2010 show at the Rio in Las Vegas.

US Composting Council

"Both the DW shredder and the SM trommel clearly outperformed their competitive counterparts, and left the guests in attendance quite impressed"

— Martin Morgan, Regional Manager
